Power Pack 1800 rechargeable battery: compact and safe

The Power Pack 1800 battery with internal charging board can be combined with all available OKIN control units. It provides an off-grid power supply for adjustable seating furniture. With its capacity of 1800 mAh, the Li-Ion Power Pack can be charged as it simultaneously carries out movements for OKIN drive systems. Its compact housing can be connected directly to the OKIN SMPS and OKIN drive system.

Additional useful features of the Power Pack include an integrated LED charge status indicator and an audible warning signal when there is a low residual charge. Several safety functions are also on board, including electronic overload cut-off, a short-circuit fuse and deep discharge protection.

Note: Responsibility for OKIN products when used for specific applications and for adherence to the appropriate guidelines, standards and laws is borne by the manufacturer of the complete system into which OKIN products are fitted. We accept no liability for the correctness.
